KEY WORDS. Cerambycidae, longicorn-beetles, crown traps, fauna.

КЛЮЧЕВЫЕ СЛОВА. Cerambycidae, усачи, кроновые ловушки, фауна.

**ABSTRACT.** The annotated list of longicorn beetles was compiled based on the work conducted in 2004–2009 in five central areas of republic Moldova. Seventy-four species of longicorn-beetles have been collected by the author, and additional four species have been obtained from other collections. *Callimoxys gracilis* Brullé, 1832 is recorded in the fauna of Moldova for the first time.

**РЕЗЮМЕ.** По результатам исследований, проведённых с 2004 по 2009 гг. в пяти центральных районах Республики Молдова, приводится аннотированный список жуков-усачей, включающий 78 видов. *Callimoxys gracilis* Brullé, 1832 впервые указывается для фауны Молдовы.

#### Introduction

Longicorn beetles have been studied in Moldova for approximately 100 years. The first list of Bessarabian Cerambycidae containing 104 species was published by Miller & Zubovskii [1917]. Subsequently, Medvedev & Shapiro [1957] provided information on distribution of 107 species. A recent publication by Nekulisyanyu & Baban [2005] lists 124 species. Analysis of all currently available information [Miller & Zubovskii, 1917; Plavilstshikov, 1940, 1958, 1965; Medvedev & Shapiro, 1957; Nekulisyanyu & Baban 2005; Baban, 2006; Dodelin et al., 2008; Danilevsky, 2009] suggests that Cerambycid fauna of Moldova is comprised about of 190 species. The present article is based on collections made by the author in five central districts of Moldova: Straesheny, Yaloveny, Chyncheshty, Novye-Aneny, and Orchey.

#### Material and methods

Specimens were collected by hand and using two different kinds of traps. Light traps were equipped by UV lamps TLD15/05 and DRL 160W. Crown traps

were deployed in 2008–2009 near villages Kozushna (~47°04'N 28°37'E) and Kaepriyana (~47°05'N 28°31'E), Straesheny district. Crown traps were placed 7.5–13.5 m above the ground on dead trees (usually oaks, but sometimes also limes and ashes) in open well-lit areas on forest edges, along trails, and on recently harvested timber plots. In total 821 specimens of longicorn beetles were analysed.

Nomenclature is given following Danilevsky [2009]. For each species, information on its distribution in Moldova is based on earlier publications.

The studied materials are kept in the following museums and private collections:

ASM — collection of Academy of Science of Moldova (Kishinev),

## Conclusion

A total of 78 species of longicorn beetles were found in Central Moldova. *Callimoxys gracilis* is the first record for the fauna of Republic Moldova. Previous record of *Dorcadion caucasicum* in Moldova was based on the incorrect identification of *Dorcadion cinerarium*. Analyses of genital morphology showed that all specimens of genus *Leiopus* really belong to *L. linnei* but not to *L. nebulosus*.

Using crown traps allowed catching the species of longicorn beetles that are usually poorly represented in collections. For example, very few specimens of *Purpuricenus kaehleri* Linnaeus, 1758 have been ever collected in Moldova. In the present study, 37 beetles were captured by crown traps, indicating that this species is not particularly rare.

The present study revealed additional 22 species that were not recorded by Baban [2006] in her investigations of forest ecosystems of central Moldova: *Rhagium inquisitor*, *Akimerus schaefferi*, *Pseudovadonia livida*, *Asemum striatum*, *Arhopalus rusticus*, *Trichoferus campestris*, *Trichoferus pallidus*, *Purpuricenus kaehleri*, *Axinopalpis gracilis*, *Stenopterus rufus*, *Molorchus umbellatarum*, *Leioderes kollari*, *Chlorophorus figuratus*, *Xylotrechus rusticus*, *Clytus rhamni*, *Dorcadion cinerarium*, *Pogonocherus fasciculatus*, *Leiopus linnei*, *Phytoecia icterica*, *Phytoecia caerulea*, *Theophilea subcylindricollis*, *Calamobius filum*. These species are not new for Moldova fauna, but it shows, that even central parts of Moldova till now needs further investigations.

ACKNOWLEDGMENTS. I thank Professor Andrei Alyokhin (University of Maine, Orono, USA) who kindly checked the English.
